

Design and Manufacturing

SEE BEYOND

At Innovatus Imaging, we see beyond the current boundaries in our industry. It is the fuel that drives our innovation in developing and commercializing new medical devices.

We've tapped into our collective knowledge and deep experience to develop a suite of offerings that span from conception, to development, to manufacturing.

Product Manufacturing

Innovatus Imaging can provide medical device assembly as a contract manufacturer or as a specification developer.

Component Development

Quick development of components for ultrasound medical devices, ensuring easy tie-in with quality systems to achieve rapid time to market and consistent product performance.

Finished Device Development

Design and manufacturing of finished medical ultrasound devices, including customer ultrasound probes and embedded ultrasound systems.

Activities are easily scaled to provide anything from module level requirements to a complete FDA 510(k) or CE Mark Technical File.

Capabilities

Innovatus Imaging delivers a complete ultrasound solution for specialty applications, taking ideas at any stage of development – whether starting from the beginning or semi-developed concepts – through to final production.

We're an independent, ISO 13485 certified designer and manufacturer of medical imaging equipment with an FDA-registered manufacturing site in the United States.

Products

Transducer Array Modules

AxoTrack with Vertical Needle Technology

Robotic Probe

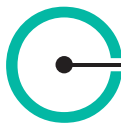

Neuro Probe

Surgical Small Parts Probe

Laparoscopic Probe
